AFFORDABLE AND PORTABLE ENERGY DATALOGGING IS HERE!

At Elcomponent we don't just sell energy data loggers, we design them, manufacture them and use them ourselves, and we've been doing so for over twenty years! Our products are designed for the real world where ease-of-use, reliability and accuracy are the watchwords. The SPCMini and its dedicated PC software package 'PowerPackPro' combine new technology and years of experience into an unbeatable low-cost package.

The SPCMini has all the features you'd expect in a 21st century design. It has a large clear display, a massive 'Flash' memory - enough for 1 minute logging for over a month - and of course, it's completely secure. Set-up and data download is via an integrated Bluetooth® communication chip, compatible with virtually any PC running Windows, so the hassle of connecting cables is a thing of the past. The SPCMini is also extremely versatile and will provide accurate results on loads as small as 1 amp, right up to a maximum of 600 amps. The logging interval is fully adjustable from 1 second (ideal for logging short-term conditions such as motor starts or lift motors) all the way to 30 minutes for ultra-long-term surveys, and with a battery life of up to 3 months, long term means just that! [\[click here for more\]](#)

The 'PowerPackPro' PC software package has been developed specifically for the SPCMini and is streets ahead of the competition. Designed by Mike Matthews, the architect of our acclaimed MeterRing MM am&T package it combines outstanding ease-of-use with many powerful features for effective energy management. THE WORLD'S BEST 3 PHASE ENERGY DATALOGGER

The SPCPro is our latest development in non-invasive 3 phase data logging. ([Click here](#) for single phase logging) and it makes the job simpler and safer than ever before. Based on the well-proven "3 currents, 1 voltage" hook-up, the only voltage connection it needs is a standard 13A wall socket. Current measurement is via fully isolated flexible hoop CTs which makes the SPCPro incredibly safe to use. The unit is also very easy to set up and connect and requires no detailed knowledge of electrical systems from the operator. It is light and compact, but also tough and water resistant to withstand years of professional use.

Measurement performance is second-to-none in its class, utilising an automatic 'autorange' feature which maintains remarkable accuracy from levels as low as 1A, all the way to 2000A - with no manual range setting required. Best of all, the sophisticated on-board electronics and dedicated PC software use a unique Elcomponent algorithm to ensure that power and energy (kWh) values are correctly calculated every time! Programming and download is via a new version our acclaimed PowerPadiPro software, and hi speed USB connection, so data transfer is fast despite the large memory capacity.

The SPCPro looks the part too... The sleek piano black case is complemented by a cool blue LCD display, the high quality Ampflex™ flex hoop CTs are connected to the unit via a neatly finished single cable so tangled wires are banished, and the kit is supplied in a bespoke zip case to keep everything tidy.

- Integral Graphing Package
- Multi-Rate Tariffs
- Automatic Energy Costing
- Automatic Reports

MeterWeb - Effective Online Energy Management for the 21st Century

MeterWeb is not just another browser based M&T package. It's a very cost effective tool to help organisations in every sector to reduce their carbon footprint and improve their energy efficiency.

At Elcomponent we've been helping our customers implement successful energy management policies for over twenty years, by providing carefully designed measurement and analysis tools. Measurement is of course the key to management and our range includes everything from a **low-cost hand-held logger** to a **multi-utility sub-Metering System** covering hundreds of locations.

Our software packages such as **MeterRing MM** and **PowerPackPro** have set new standards in value and ease-of-use, and Meterweb continues that tradition.
